

# An Image Degradation Model for Depth-augmented Image Editing

***James W. Hennessey***

*Niloy J. Mitra*

University College London

*Symposium on Geometry Processing 2015*

move objects  
change perspective  
(update occlusion)

1. Can we simplify the operations?
2. Can we predict how well the ops will perform?

[Oh et al. 2001]

Input

[Carroll et al. 2010]

[Zheng et al. 2012]

[Chen et al. 2013]

[Kholgade et al. 2014]

*so what changed?*

# Depth Sensors

missing depth

# Depth Sensors

# Depth Sensors

*single image*  
*RGB + (bad) depth*

RGB channels

depth channel

## *Challenges*

- (i) bad/missing depth
- (ii) RGB-D misalignment

# Example: Parallax Video

Scene Decomposition and Layering

Image Degradation Model

Applications

## **Scene Decomposition and Layering**

Image Degradation Model

Applications

segmentation

primitive extraction

depth completion/  
reassignment

# Scene Decomposition

$$\mathbf{n} \cdot \mathbf{p} + d = 0$$

$$E_u(i) := \frac{1}{N} \sum_{i=1}^N (|\mathbf{p}_i \cdot \mathbf{n}_{\text{prim}} + d_{\text{prim}}|) + \lambda \exp(-|\mathbf{n}_{\text{sp}} \cdot \mathbf{n}_{\text{prim}}|)$$

+

$$E_p(i, j) := \alpha \exp(-\|\mathbf{c}_i - \mathbf{c}_j\|) + \beta \exp(-|d_i - d_j|)$$

# Scene Decomposition

infilled depths

RGB layers

planar objects

non-planar objects

# Occlusions

identify occlusion with primitives

clipping with primitives

# RGB-D Image $\rightarrow$ Layered Rep.

image  $\rightarrow \{(\text{imageSegment}_i, (\mathbf{n}_i, d_i), \text{clipping}_i, \text{depth}_i)\}$

# More Examples

Scene Decomposition and Layering

**Image Degradation Model**

Applications

# Degradation Model

(images with common normalisation)

$$\textit{texture}(i, j) := \frac{1}{N} \sum_{x=-k:1:k} \sum_{y=-k:1:k} |I(i+x, y+j) - I(i, j)|$$

# Degradation Model

Scene Decomposition and Layering

Image Degradation Model

**Applications**

# 1. Layer-assisted DoF

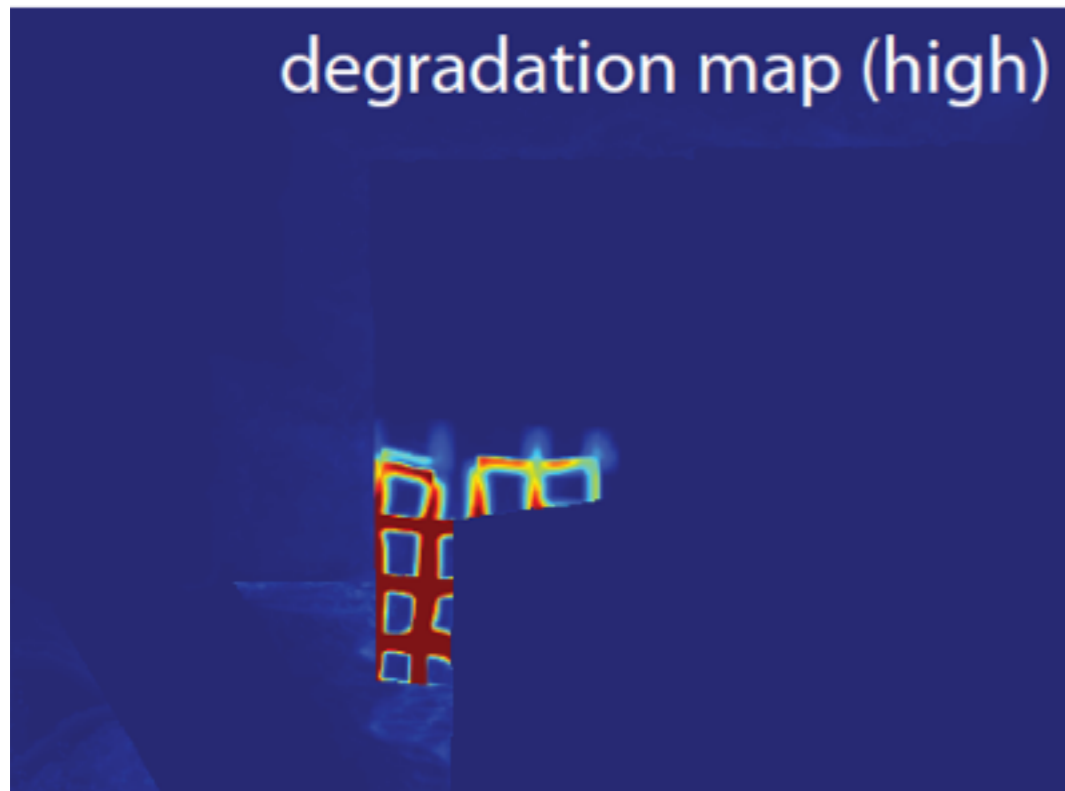

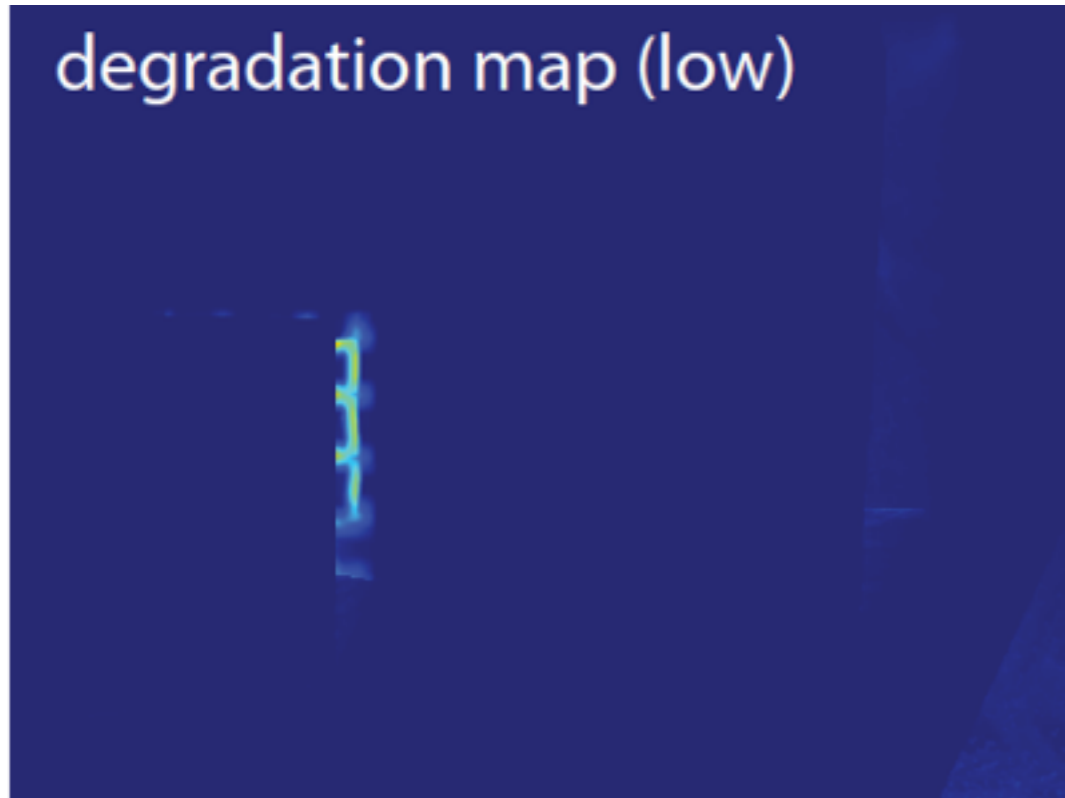

**Output: DoF Parallax Photo**

# 2. Novel View Synthesis

# Predicting Image Degradation

**Input: RGB-D Image**

# Limitations

User scribbles for thin segments

Bleeding across edges (pixel level)

No perceptual limits

## **scene abstraction**

coupled segmentation, proxy fitting, primitive assignment

an image **degradation model**

camera path planning + assisted editing

other primitives
